

Attention Is All You Need

Abstract

We propose a novel attention mechanism that replaces recurrence and convolutions.

1 Introduction

Transformer is a new architecture based solely on attention mechanisms.

2 Methodology

Self-attention with Query, Key, Value projections. Multi-head attention allows the model to attend to information

3 Experiments

We achieve 28.4 BLEU on WMT 2014 En-De, surpassing previous state-of-the-art by 2.0 BLEU.

Continued... Multi-head attention with 8 heads. Positional encoding added.

Conclusion: Transformer achieves better quality with parallelization and shorter training time.
